

ISRAFIL HOSSAIN

Full Stack Developer

 +8801403221969 |  webfil303@gmail.com |  <https://github.com/fil303>
 <https://gitlab.com/fil303>

Summary

Software Developer with over **4+ years of experience** in building scalable web applications. Proficient in PHP, JavaScript and experienced with **Laravel** framework. Played a key role in the development of a cryptocurrency trading platform with lots of active users, contributing to backend services, blockchain integration, and ensuring high availability with Redis, Supervisor, and queue management. Focused on writing clean, efficient code and delivering robust solutions.

Skills

- **HTML, CSS, JavaScript, PHP, Laravel, ExpressJS, Web3JS, API, XDebugger**
- **MySQL, Docker, WebSocket, GIT, Linux, SQL, PHPStan, Tailwind CSS**

Work Experience

Executive Software Engineer

[Itech Soft Solution](#) | Goborchaka Bowbazar, Khulna, Bangladesh | 05/2022 – 07/2026

- Backend Developer specializing in **Laravel** and **ExpressJS**, with the majority of work focused on Laravel-based development.
- Designed and developed robust **APIs** to support the frontend and mobile applications, ensuring seamless user experience across platforms.
- Implemented new features, including **payment gateway** integrations, enhancing platform functionality and streamlining transaction processes.
- Developed a critical **security function** using **Sodium** to **encrypt and decrypt cryptocurrency wallet private keys**, ensuring safe storage and transfer of sensitive data in both **PHP** and **NodeJS**.
- Followed best practices for **clean, reusable, and efficient code** to maintain high standards of software quality and reduce technical debt.
- Worked extensively with **VPS Ubuntu server** to manage and deploy applications, ensuring **high availability** and **performance optimization** for the platform.
- Configured and maintained **Nginx** as the web server on **VPS Ubuntu** for hosting applications, ensuring optimal performance, load balancing, and secure HTTP configurations.

Jr. Software Engineer (Intern)

[Apitsoft](#) | Shibbari, Khulna, Bangladesh | 09/2021 – 03/2022

- Worked on the development of a **task management system** using **Laravel** to streamline task tracking and project management workflows.
- Assisted in designing and implementing **CRUD (Create, Read, Update, Delete) operations** for managing tasks, users, and project data within the application.

- Contributed to **UI development** by integrating front-end designs and ensuring responsive layouts using Bootstrap and JavaScript.
- Gained hands-on experience with **Laravel** framework best practices, **MVC architecture**, and **RESTful API** development.

Projects

- 1) **Crypto Spot Trading Platform** : A high-traffic cryptocurrency trading platform with lots of active users. Built with **Next.js** and **Laravel**, hosted on **VPS Ubuntu**. The platform supports buying, selling, staking, secure wallet management and more.
 - **Role:** Backend Developer
 - **Technologies Used:** **Laravel, ExpressJS, NextJS, Redis, Nginx, PHP8.4, MySQL**
 - **Responsibilities:** As a Backend Developer for the Crypto Trading Platform I played a key role in developing and maintaining the backend of the platform, which is built using Laravel and ExpressJS and NextJS. I was responsible for creating and optimizing APIs that enabled seamless integration with both the mobile and frontend applications.
 - **Url:** <https://tradepro.org>
- 2) **Crypto Peer to Peer Selling Platform** : A high-traffic cryptocurrency trading platform with lots of active users. Built with **Bootstrap** and **Laravel**, hosted on **VPS Ubuntu**. The platform supports p2p buying/selling, secure wallet management and more.
 - **Role:** Full Stack Developer
 - **Technologies Used:** **Laravel, BootStrap, Redis, Nginx, PHP8.4, MySQL**
 - **Responsibilities:** As a Full Stack Developer for the Crypto Peer-to-Peer Selling Platform, I was responsible for both frontend and backend development using Laravel, Bootstrap, MySQL. I worked on building key features, including the platform's peer-to-peer crypto trading system, where users could securely buy and sell cryptocurrencies directly with one another.
 - **Url:** <https://tradepro.org/p2p>
- 3) **Crypto Investment Platform** : A Crypto Investment Platform Built with Laravel, Tailwind, MySQL, Redis, and AlphinJS
 - **Role:** Full Stack Developer
 - **Technologies Used:** **Laravel, Tailwind, Redis, Nginx, PHP8.2, MySQL**
 - **Responsibilities:** As a Full Stack Developer, I independently designed and developed a Crypto Investment Platform from scratch. Built with Laravel, Tailwind CSS, MySQL, Redis, Queue, and AlphinJS, the platform allows users to invest in cryptocurrencies.
 - **Source code and Demo URL :** <https://github.com/fil303/walletoipro>
- 4) **Crypto Future Trading**: A high-traffic cryptocurrency trading platform with lots of active users. Built with **Next.js** and **Laravel**, hosted on **VPS Ubuntu**. Binance Futures trading allows traders to speculate on whether a cryptocurrency's price will rise or fall without owning the actual asset. Traders open either a **Long** position to profit from price increases or a **Short** position to profit from price decreases, using leverage to control a larger position with a smaller amount of capital. As the market price changes, unrealized profit or loss is calculated continuously, and if losses exceed the available margin, the position may be liquidated automatically. Traders can close their positions at any time to realize profits or losses, while

Binance charges trading fees and, for perpetual futures, periodic funding fees between long and short traders.

- **Role:** Backend Developer
- **Technologies Used:** **Laravel, NextJS, Redis, Nginx, PHP8.4, MySQL**
- **Responsibilities:** As a Backend Developer for the Crypto Future Trading Platform I played a key role in developing and maintaining the backend of the platform, which is built using Laravel and NextJS. I was responsible for creating and optimizing APIs that enabled seamless integration with both the mobile and frontend applications.
- **Url:** <https://tradepro.org/futures/exchange/BTCUSDT>

5) **Spot Copy Trading Platform** : A high-traffic cryptocurrency trading platform with lots of active users. Built with **Next.js** and **Laravel**, hosted on **VPS Ubuntu**. The platform copy trading allows users to automatically copy the trades of an experienced Lead Trader. When a Lead Trader opens, modifies, or closes a position, platform automatically executes the same trade in the followers' accounts based on their allocated investment and copy trading settings. Each follower keeps full ownership of their own funds and receives their own profits or losses, while the Lead Trader earns a profit-sharing commission from the followers' realized profits.

- **Role:** Backend Developer
- **Technologies Used:** **Laravel, NextJS, Redis, Nginx, PHP8.4, MySQL**
- **Responsibilities:** As a Backend Developer for the Crypto Trading Platform I played a key role in developing and maintaining the backend of the platform, which is built using Laravel and NextJS. I was responsible for creating and optimizing APIs that enabled seamless integration with both the mobile and frontend applications.
